The [Global Gender Gap Index](#) is a metric developed by the World Economic Forum to assess gender parity within each country. The score is based on 4 dimensions: Economic Participation and Opportunity; Educational Attainment; Health and Survival; and Political Empowerment. The GGGI has been tracking the progress of countries ability to close the gender gap since 2006. Scores presented are from the June 2023 report, with World Cup (WC) and Global rankings included.

Globally, Iceland scored highest in 2023 (0.912), with Afghanistan ranking last (146th, 0.405). Amongst World Cup participants, Columbia saw the greatest year-to-year improvement (+4.1%). Haiti was not included in the rankings - only countries providing a minimum of 12 of 14 indicators were assessed.

Note: England score uses United Kingdom data (includes independent FIFA members Northern Ireland, Scotland, and Wales) in the calculation.
